

Download instructions:

1. While in Main, click Distributions.

The screenshot shows a GitHub repository named 'CS3300-softwareproject'. The 'Distributions' folder is highlighted. The README file contains the following text:

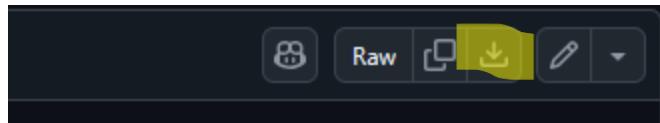

CS3300-softwareproject

This repo is a group project for CS3300. For this project we decided to create a small inventory management system that will have room to improve for future expansion. It will come with all of the basics needed to run a locally based inventory tracker for a small business. It will use Tkinter for GUI interface and SQLite for database functionality.

2. Find the Operating system your computer uses be it Windows, Mac, or a Linux based system. For this example, we will use windows.

The screenshot shows the 'Distributions' folder in the GitHub repository. The 'InventoryManager-windows-latest.zip' file is highlighted.

3. On the following screen in the bar that says Code | Blame look at the right-hand side for the download button click it and select your save location I would suggest some where easy to find like your desktop.

4. Once the download is done the program will be on your system. Return to step 2 of the user manual.
